Patterson Completes Energy Efficient Roof System Design Program

ROMEDEVILLE, IL – Bennett & Brosseau Roofing, Inc. reports that George Patterson, its VP of Operations, completed the pilot SpecRight Program training session, which was developed by the National Roofing Contractors Association (NRCA) and is supported by several industry partners. The program provides value added tools to help building owners make informed decisions about roofing systems, specifically on how to conserve energy and protect the environment through roof system design, materials, installation, and maintenance. Patterson received a certificate signifying his successful completion of the program and is knowledgeable in the design, installation and maintenance of energy-efficient roof systems that comply and/or exceed current local building energy standards. As a SpecRight Contractor, Bennett & Brosseau offers building owners solutions that enhance their building envelope's performance and provides long-term cost savings through energy-efficient roof system design – a critical factor as energy prices continue to raise.

SpecRight Program's official launch will be during the NRCA's 119th Annual Convention in February 2006. For more information about the SpecRight Program, visit www.specright.net.
